

DS027 – Research Transparency and Public Access

PURPOSE

This policy document establishes the U.S. Census Bureau’s commitment to supporting public access and equitable delivery of federally funded research results and data. It also supports the Census Bureau’s commitment to being transparent in the conduct of its mission while meeting its statutory and ethical obligations to protect respondent privacy, confidentiality, information, and system security.

This policy promotes the following objectives:

- Reaffirm the Census Bureau’s commitments to
 - promote open science, increase transparency, and support reproducibility;
 - be transparent with respondents about how their data are used;
 - protect respondent privacy and confidentiality; and
 - Increase trust in federal statistics and statistical products.
- Ensure effective access to and reliable preservation of Census Bureau research output (e.g., working papers, peer-reviewed publications, data briefs, etc.) and digital scientific data for use in research, development, education, and scientific discovery.
- Fulfill requirements in the Office of Science and Technology Policy (OSTP’s) August 25, 2022, memorandum subject “Ensuring Free, Immediate, and Equitable Access to Federally Funded Research”¹ to develop public access policies..

BACKGROUND

The Census Bureau operates under Title 13 U.S.C.,² which mandates the confidentiality of its data. When information is not confidential, several laws require transparency and openness by federal agencies, including the Freedom of Information Act (FOIA) and OPEN Government Data Act. Furthermore, laws such as the Privacy Act and Paperwork Reduction Act (PRA) codify the American Public’s right to know what data the Federal Government collects from or about them, and how the government will safeguard and use that information.

The Census Bureau has long recognized that respecting these rights is both a legal obligation, and a key to maintaining the public trust. We have institutionalized these obligations through the *Privacy Principles*.³ that form the backbone of our Data Stewardship Program.

¹ <https://www.whitehouse.gov/wp-content/uploads/2022/08/08-2022-OSTP-Public-Access-Memo.pdf>

² <https://www.govinfo.gov/content/pkg/USCODE-2009-title13/html/USCODE-2009-title13.htm>

³ https://www2.census.gov/foia/ds_policies/ds0pp.pdf

The Census Bureau also recognizes that transparency is a well-recognized best practice among professional and statistical research organizations,⁴ and an operational component in fulfilling our mission “to serve as the nation’s leading provider of quality data about its people and economy.” We follow statistical policy from the Office of Management and Budget (OMB). As part of following statistical policy from OMB, the Census Bureau adheres to Statistical Policy Directive No. 1,⁵ and the corresponding guidance in the *Principles and Practices for a Federal Statistical Agency*.⁶

Statistical Policy Directive No. 1 has identified the following four core principles as informing its requirements for Federal Statistical Agencies:

- Relevance to Policy Issues
- Credibility Among Data Users
- Trust Among Data Providers
- Independence from Political and Other Undue External Influence

Along with our sister Federal Statistical Agencies, the Census Bureau has stated its commitment to the principle of scientific integrity.⁷ The Census Bureau’s Scientific Integrity Policy is related to this policy as transparency and inclusivity are hallmarks of scientific integrity.⁸

This policy will serve as a foundational document intended to guide the Census Bureau to be more transparent, as well as align our transparency efforts to those four core principles.

SCOPE

This policy does not apply to or permit the public release of information made confidential by Title 13 U.S.C; trade secrets; commercial information; or similar information protected under law. Also, this policy does not apply to or permit the public release of information, data, or other materials that a researcher or employee must hold confidential until they are published, such as principal economic indicators and derivative information covered by OMB Statistical Policy Directive No. 3 or pre-release statistical products and derivative publications covered by OMB Statistical Policy Directive No. 4. This policy does not apply to or permit the public release of personnel, medical, or similar information, the disclosure of which would constitute an unwarranted invasion of personal privacy.

⁴ Examples include: National Academies of Sciences, Engineering, and Medicine’s *Methods to Foster Transparency and Reproducibility of Federal Statistics: Proceedings of a Workshop*, <https://doi.org/10.17226/25305>, <https://www.nationalacademies.org/our-work/transparency-and-reproducibility-of-federal-statistics-for-the-national-center-for-science-and-engineering-statistics> (in preparation), as well as the American Association for Public Opinion Research’s Transparency Initiative: <https://www.aapor.org/Standards-Ethics/Transparency-Initiative/FAQs.aspx>

⁵ Codified at 44 U.S.C. § 3563

⁶ National Academies of Sciences, Engineering, and Medicine, *Principles and Practices for a Federal Statistical Agency: Seventh Edition*, <https://doi.org/10.17226/25885>

⁷ https://www.census.gov/about/policies/quality/scientific_integrity.html

⁸ https://www.census.gov/content/dam/Census/about/about-the-bureau/policies_and_notices/scientificintegrity/Census_Bureau_Scientific_Integrity_Policy.pdf

This policy document does not apply to or permit the public release of administrative or third-party records provided to the Census Bureau under a contract, agreement, or other data acquisition instrument. The disclosure of such records is governed by the terms of the contract, agreement, or other legal instrument under which they were acquired.

The Census Bureau protects confidentiality and personal privacy and recognizes proprietary interests, business confidential information, and intellectual property rights.

Transparency requirements associated with direct data collections are generally met by the Census Bureau's adherence to requirements in the Paperwork Reduction Act⁹ and Privacy Act¹⁰ and related guidance issued from OMB. Direct data collections also carry unique additional concerns such as those related to interactions with a respondent covered separately by the *Policy on Accepting Reimbursable Projects*¹¹ or sensitive topics in dependent interviewing covered by the *DS016: Policy on Respondent Identification and Sensitive Topics in Dependent Interviewing*¹² policy.

POLICY

Relevance to Policy Issues

A core part of accomplishing the Census Bureau's mission is ensuring our data are made available for timely, topical, and policy-relevant research. We achieve this goal by producing data products that support use by the statistical research community and the public and partnering with other agencies to do the same. Furthermore, we encourage our staff to pursue approved self-directed statistical research and support external researchers in pursuing answers to new and novel statistical research questions. To that end, the Census Bureau is committed¹³ to supporting the use of its data for any statistical activity¹⁴ that:

1. Has statistical merit;¹⁵
2. Meets the requirements of Title 13 U.S.C. § 23(c);
3. Delivers a Title 13 U.S.C. benefit;¹⁶
4. Is feasible and based in sound methodology;
5. Has a clearly demonstrated need for confidential data;

⁹ 44 U.S.C. 3501 et seq.

¹⁰ 5 U.S.C. §552a (e) (3)

¹¹ *DS015: Policy on Accepting Reimbursable Projects*: https://www2.census.gov/foia/ds_policies/ds015.pdf

¹² https://www2.census.gov/foia/ds_policies/ds016.pdf

¹³ Subject to the availability of resources, funding, and consistency with mission.

¹⁴ While not binding as a Title 13 definition, CIPSEA defines statistical activities as follows: 8) 44 U.S.C. §3501 Sec. 502(7)- the term "statistical activities" — (A) means the collection, compilation, processing, or analysis of data for the purpose of describing or making estimates concerning the whole, or relevant groups or components within, the economy, society, or the natural environment; and (B) includes the development of methods or resources that support those activities, such as measurement methods, models, statistical classifications, or sampling frames.

¹⁵ The Standard Application Process (SAP) Portal encompasses some aspects of "statistical merit" under the "feasibility" criteria. See the SAP Policy for more information: <https://www.whitehouse.gov/wp-content/uploads/2022/12/M-23-04.pdf>

¹⁶ *DS002: Policy on Title 13 Benefit Statements*: https://www2.census.gov/foia/ds_policies/ds002.pdf

6. Proposes output that can meet the Census Bureau's statistical disclosure avoidance standards;¹⁷ and
7. Is consistent with and does not pose undue risk to either the mission or reputation of the Census Bureau.

The Census Bureau will be transparent in its project review and approval process and document its decisions thoroughly. The Census Bureau will communicate decisions and any relevant details to the submitter(s). Generally, the Census Bureau will not publicly release details regarding the review process for any particular project; however, the Census Bureau may make the synopsis of the project review available on request.

As necessary, the Data Stewardship Executive Policy Committee (DSEP) and its designated subcommittees review and make final determinations, as needed, depending on the sensitivity of the project. For more information, refer to the Handbook for Administrative Data Projects.¹⁸

Credibility among Data Users

The Census Bureau recognizes that transparency in our methods and our decision-making processes is essential to maintaining credibility among our data users.

The Census Bureau will publish all Data Stewardship policies, as well as information about DSEP and its composition, on the external facing Census.gov website.

The Census Bureau will follow OMB statistical policy for publishing documentation on our data products and methods. These standards will also be reflected in our own statistical quality standards.¹⁹

The Census Bureau acknowledges that a challenge to the credibility of research is withheld output. Unless otherwise stipulated by the terms of an agreement, the Census Bureau will not withhold output from internal, joint, or reimbursable research projects²⁰ within the scope of this policy²¹, the agency only recognizes four legitimate reasons for not publishing statistical output:

1. The output does not meet the Census Bureau's Statistical Quality Standards;
2. The output is outside the scope of the approved project or approved uses of the data per any applicable agreements;
3. The output consists of intermediate or interim results, or otherwise contains unacceptable error;

¹⁷ DS025: Organization of the Disclosure Review Board: https://www2.census.gov/foia/ds_policies/ds025.pdf

¹⁸ DS001b Handbook for Administrative Data Projects:
https://www2.census.gov/foia/ds_policies/ds001_appendices.pdf

¹⁹ https://www.census.gov/content/dam/Census/about/about-the-bureau/policies_and_notices/quality/statistical-quality-standards/Quality_Standards.pdf

²⁰ Agreements to conduct reimbursable or joint statistical work should include clear, agreed-upon terms regarding data delivery and right to review output prior to publication.

²¹ https://www.osec.doc.gov/opog/dmp/daos/dao219_1.html

4. The output presents an unacceptable disclosure risk as determined by the Census Bureau's Data Stewardship Executive Policy committee or through its delegated authority to the Disclosure Review Board (DRB).²²

Regarding external research projects, the Census Bureau recognizes that the publication process can take time and researchers want to present their findings and receive credit for their research. However, as a public agency we have an obligation to be transparent with the public as to the research carried out using Census Bureau data. Additionally, the Census Bureau realizes the full Title 13 benefit from research that uses Census Bureau confidential data occurs only when the results have been properly peer reviewed and published in the appropriate disciplinary outlet.

To that end, the Census Bureau will adopt the following measures regarding external projects. The agency will take steps to make basic information on all approved projects and submissions approved by the Disclosure Review Board publicly available and will make the full content of any output that has passed disclosure review available upon request.

In connection with their Disclosure Review submission, the Census Bureau will require Principal Investigators (PI) on external projects to agree to the following:

- The PI will endeavor to publish any final output from their research as soon as possible, but preferably within 36 months after passing disclosure review.
- The PI will use the Census Bureau's recommended citation,²³ including the DRB clearance number, when displaying any data output cleared by the DRB.
- The Census Bureau will attempt to tie the researchers' presentations or paper citations back to project information the Census Bureau has posted on the web.
- As part of their disclosure review submission, the PI will be provided an opportunity to include the following information which the agency will release along with any information about their project if requested by a third party:
 - The PI's contact information and affiliation.
 - Whether the output is intended to be interim or final.
 - Instructions to credit or contact the PI in the event the results are released before the PI has had a chance to publish.
 - A reasonable amount of additional information or comments the PI would like to include in any release made by the Census Bureau of their research output.

The Census Bureau recognizes the value of reproducibility, replicability, and peer review in research. It also recognizes that many leading peer-review journals require the researcher to provide a reproducibility/replicability package associated with the proposed article. The Census Bureau will work to improve our ability to support peer review and replication where possible for our internal, external, and reimbursable research projects.

²² https://www2.census.gov/foia/ds_policies/ds025.pdf

²³ A Digital Object Identifier (DOI) may serve in place of a recommended citation if appropriate.

The Census Bureau will, subject to the availability of funds and resources and the feasibility of the proposed methodology, support external research designed to assess the quality of our data products and programs and recognizes the implicit value to the agency of this work. This support may come in the form of provisioned access to data through the Federal Statistical Research Data Center (FSRDC) network for related external projects, joint statistical partnerships with other agencies, and internal project support from outside researchers.

The Census Bureau will pursue partnerships with researchers on the cutting edge of statistical, social, demographic, and economic research. These partnerships offer the Census Bureau the opportunity to explore new methods, create new data products, and provide novel insights into the social and economic wellbeing of the Nation. The Census Bureau is committed to being transparent about these relationships and the types of work they support.

As a statistical organization, we recognize the value of open innovation. We will support the use of our data for the creation of new and novel data products. When we create experimental data products, we will inform the public of their uses, including supporting research with their release and limitations.

Trust Among Data Providers

The Census Bureau recognizes that transparency is critical to maintaining trust between the agency and our respondents and providers of administrative data. To that end, we are committed to meeting obligations under the Privacy Act and the Paperwork Reduction Act to inform the public of the information we collect, the purposes for which we collect that information, and how we protect that information. Furthermore, we will take steps to maintain an accurate, complete, and publicly available data inventory as required under the OPEN Government Act, as well as up-to-date information about what data are available to be requested for use in research.

We are committed to negotiating with our data providers and source agencies using straightforward and clear language so that they fully understand how the Census Bureau will use and safeguard data that they provide to support our programs.

In addition to the Census Bureau's statutory obligations, such as the required publication of System of Records Notices, the agency will take steps to be open with the public about the type of data we collect and how we use it. We will be transparent about the types of data we collect, our data linkage activities,²⁴ and secondary uses of collected data.²⁵ Further, we will continue to share our research activities as openly and in as much detail as possible and will share information with the public regarding new and novel data collection and analysis techniques the agency will be using.

²⁴ DS014: Data Linkage Policy: https://www2.census.gov/foia/ds_policies/ds014.pdf

²⁵ DS001a: Administrative Data Acquisition, Access, and Use Policy: https://www2.census.gov/foia/ds_policies/ds001.pdf

Independence from Political and Other Undue External Influence

The Census Bureau recognizes the important role of transparency in limiting any undue political or other external influences in the fulfillment of our mission and the publication of dependable unbiased statistics. The Census Bureau Scientific Integrity Policy directly addresses independence from political or other undue external influence.²⁶

Consistent with law and existing policy, projects must be approved before any access is granted to confidential data. Unless prohibited by law,²⁷ or otherwise inconsistent with legal, policy, or regulatory requirements,²⁸ the Census Bureau will release information about any approved project that uses Census Bureau data to the public upon request. The agency will continue to take proactive steps to make information about all our internal and external projects publicly available, though currently program areas may approach this mandate differently.²⁹

Any custom tabulations or extracts will be disclosed in accordance with the *Policy on Providing Custom Tabulations and Custom Extracts Under 13 U.S.C. § 8(b)*.³⁰

The Census Bureau may, at times, engage external subject matter experts to support the project review process. However, only career Census Bureau staff may make final determinations regarding adherence to the seven criteria listed under *Relevance to Policy Issues* above. DSEP is the final arbiter of any disagreement about adherence to the criteria.

The Census Bureau has the discretion to reject any project that presents a specific risk to the mission or reputation of the Census Bureau. The Census Bureau alone can and will determine whether that risk outweighs the potential public benefit of the project. The Census Bureau will make it clear to the researcher that the project was rejected on these grounds, and they will be permitted to appeal the decision to DSEP. Note: Standard Application Process (SAP) projects may have their own requirements for denials and appeals of a project.³¹

Peer-reviewed Scholarly Publication and Associated Data Access for Research Funded Wholly or in Part by the Census Bureau

This section applies to the results of research funded wholly or in part by the Census Bureau, presented in peer-reviewed scholarly publications, including book chapters and peer-reviewed conference proceedings as appropriate, and “scientific data” as defined in the Office of Science

²⁶ [Census Bureau Scientific Integrity Policy](#)

²⁷ For example, certain project metadata may be protected by Title 26 U.S.C.

²⁸ For example, researchers may have certain legally enforceable intellectual property rights related to their methodology.

²⁹ Examples include the CES Annual Report: <https://www.census.gov/programs-surveys/ces/library/ces-annual-report.html>, the ADRM Linkage Projects Site: <https://www.census.gov/about/adrm/linkage/projects.html>, and information on external projects using Census Bureau data in the FSRDCs <https://www.census.gov/about/adrm/fsrdc/about/ongoing-projects.html>

³⁰ https://www2.census.gov/foia/ds_policies/ds021.pdf

³¹ [Establishment of Standard Application Process Requirements on Recognized Statistical Agencies and Units \(whitehouse.gov\)](#)

and Technology Policy (OSTP's) August 25, 2022, memorandum subject "Ensuring Free, Immediate, and Equitable Access to Federally Funded Research."³²

Research funded wholly or in part by the Census Bureau includes:

- Internal research produced by a Census Bureau employee as part of their official duties or external researcher supporting an internal project.
- Joint projects with a federal agency or nonprofit.

Research funded wholly or in part by the Census Bureau excludes:

- Research being performed under a reimbursable agreement.
- External research projects done via FSRDC network.

For activities funded by both the Census Bureau and any other source that may have differing public access requirements, the provisions of this policy will apply unless otherwise specified by the Census Bureau in its agreements, contracts, or cooperative agreements.

All peer-reviewed scholarly publications and associated data arising from research and programs funded wholly or in part by the Census Bureau will be freely available to the public in a publicly accessible institutional repository. Subject to the same conditions and constraints listed in the SCOPE section and/or any other potential restrictions or limitations on data access, use, and disclosure, including those defined in terms and conditions of agreements, or that convey from a data use agreement or stipulations of an Institutional Review Board, the Census Bureau will promote the deposit of scientific data arising from research and programs, funded wholly or in part by the Census Bureau, to make it available free of charge unless otherwise exempt, in publicly accessible repositories, simultaneously with or before publication of associated manuscripts. Other federally funded scientific data that is not associated with peer-reviewed scholarly publications, but is expected to be useful to interested parties, will be shared. Metadata associated with data will be publicly accessible and reusable.

Publicly accessible versions of narrative and data publications will be machine-readable and accessible through assistive devices to the extent possible. Publicly available metadata associated with both narrative and data publications will include all author and co-author names, affiliations, sources of funding, date of publication, and unique persistent identifiers (PIDs) for all authors, institutions/organizations, funders, and research outputs as available. Digital persistent identifiers for all authors and co-authors will meet the common/core standards of a digital persistent identifier service defined in the NSPM-33 Implementation Guidance.³³

³² <https://www.whitehouse.gov/wp-content/uploads/2022/08/08-2022-OSTP-Public-Access-Memo.pdf>

³³ See Point 5 in the Digital Persistent Identifiers section of the NSPM-33 Implementation Guidance at <https://www.whitehouse.gov/wp-content/uploads/2022/01/010422-NSPM-33-Implementation-Guidance.pdf>

Data/works created by Census Bureau employees generally are not subject to copyright protection within the United States. Census Bureau data or other works may be subject to copyright protection in foreign countries. The Census Bureau may also obtain and hold copyright in data/works created by non-Census Bureau employees (e.g., contractors) when copyright is assigned to the Census Bureau.

All proposals or plans for activities that will generate scientific data using Census Bureau funding will be required to (1) adhere to a Census Bureau-approved Data Management Plan (DMP) that describes how scientific data generated through the course of the proposed work will be shared and preserved or (2) explain why data sharing and/or preservation are not within the scope of this plan. The DMP need not be a stand-alone document and may instead be a part of Project Plans, including Dissemination Plans and the Census Bureau Statistical Quality Standards.³⁴

Census Bureau supervisors will be required to ensure staff compliance with the requirements of DMPs, including those for preservation and discoverability.

Authors of peer-reviewed scholarly publications will be required to submit to the Census Bureau public access repository the author's accepted version of a final peer-reviewed manuscript within the scope of this policy concurrent with publication. Along with this manuscript, the author must submit any associated metadata. In lieu of the accepted version of the final peer-reviewed manuscript, the Census Bureau will accept the final published article, as formatted by the journal.

Reasonable costs associated with publication, including submission, curation, management of data, and special handling instructions should be included in project plan budgets for contracts and agreements. DMPs of contractors and other individuals with Special Sworn Status and budgets for public access activities will be reviewed as part of the contract or project review process. Contractors or researchers will specify the data repository or repositories they expect to use. Such repositories should be aligned with OSTP guidance.³⁵ ³⁶ Agreements or contracts will include terms specifying that non-compliance with the repository requirements may result in suspension or termination.

Compliance will be monitored and reported consistent with guidance from OMB.
